Making Sense of Economic Decline in an Age of Peak Oil

A Discussion with Nicole Foss

Nicole Foss is one of those rare people who understands and explains the links between the global dangers of resource depletion, economic failure and increasing inequity. She has multiple degrees in biology, neuroscience, psychology, international law, and air and water pollution. After years as editor of The Oil Drum Canada writing about peak oil and finance, Nicole is now co-editor of The Automatic Earth.

Join us for a graphic presentation and question and answer session where Nicole will outline the direction and characteristics of a new environmentally sustainable economy and what this means in our everyday lives. She will discuss what is coming, why it is coming, what you can do about it, and how urgent it is that you do it now. Most importantly though, she will prepare people to work with their communities to create a brighter (though lower energy) future.

I've been following Nicole avidly on The Automatic Earth, plus watching many YouTube films of her talks. She is the most coherent and logical thinker on the big issues that I have come across. Mark Adams, Ex Petroleum Engineer

28th February, 6pm Margaret River District Club

Hosts: Sustain Margaret River

RSVP: cyndamiles@gmail.com

9th March, 6pm St. Matthews Hall, Stirling Square, Guildford
